A world. Within reach.

Master phone design system, component library and production instructions prepared for Sehly.

Grounded in the owner-selected film. Original source: 180s / 512 x 910 / 30fps. This is a design handoff, not a new film render.

Read the reference first

Visual authority

The attached film is the selected visual direction. Real source frames are included. Prior portfolio films and the live application are separate artifacts.

What is numeric

Colors and glass/bronze values draw on the documented source baseline f24f394. Phone layout values and starter mesh dimensions are proposed reconstruction inputs.

What is included

12 SVG components, 12 PNG exports with alpha, 7 GLB starter models, 5 schematic phone artboards, CSS/JSON tokens, exact film copy and full generation prompts.

What still needs source assets

Official NOJARA logo, licensed font files, approved portrait/media and original camera/audio source. Do not fabricate them.

Approval status

Owner selected the visual reference. This does not establish separate publication approval of each slogan. Copy is not attributed to Tarek.

Phone composition

390 x 844 CSS px / 24 px margins / 4 columns / 12 px gutters. Adapt to 360, 393 and 430 widths. Measure actual safe areas.

Header

x .50W / y .064H

Headline

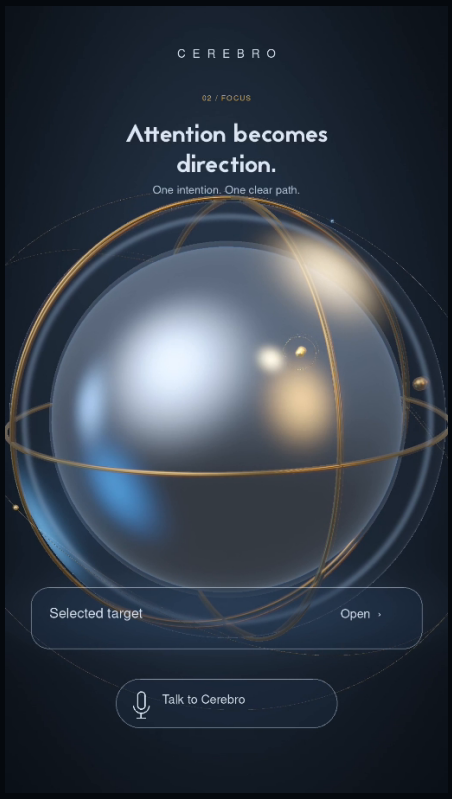

top .15H / width W-48

Sphere

idle center .50W,.52H / diameter .78W

Voice

center .88H / 220-256 x 48-56px

Camera travel can overscan the sphere. Titles and controls must stay readable. Values are reconstruction starting points.

Display / Jaapokki Subtract

28px / 31.4px at 390 width. Obtain the approved licensed font. This portable PDF uses DejaVu and is not a brand-font specimen.

Body and labels

Inter proposed body: 14/20. Eyebrow 9px with 1.8px tracking. Top CEREBRO label 10px with 4.5px tracking. Test after font loading.

Physical material family

Glass shell

Related source baseline: transmission .96, roughness .04, IOR 1.52, clearcoat .9. Normalized starter uses .03R thickness, not the source scene 2.8 value.

Silver core

Proposed metalness .94 and roughness .28. Brush grain direction must be coherent. Final brushed maps remain to be authored.

Gold rails

Bronze baseline #8C6A45 / metalness .85 / roughness .18. Gold is a rail and attention accent, not a solid gold sphere.

Lighting

Broad cool key, narrow warm upper rim, blue lower fill and subdued floor bloom. Lock one lighting scene across all asset views.

Geometry

Hero radius 1; core .82R; ring radius 1.015R; tube .008R. Seven GLB starter models included. Final visual matching remains required.

Components / voice and focus

C06 / Voice capsule

Idle centered at .88H; 220-256px wide, 48-56px high; microphone 24px visual, >=44px target. Reserve safe-area bottom plus 16px.

C07 / Listening

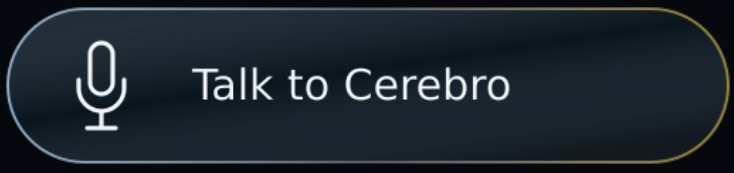

Teal concentric rings, radii 24/30/38 CSS px; level-driven scale 1.00-1.04; show Listening and Stop/mute controls with explicit semantics.

C08 / Selected target

Panel x=24, width=W-48, y=.74H proposed; 20px radius; 16px padding; target label and Open action. Move capsule below with >=16px gap.

C09 / Detail panel

Same glass family; heading + Overview / Explore rows, each >=44px. Panel may overlay empty sphere area but must not obscure face, title, or selected content.

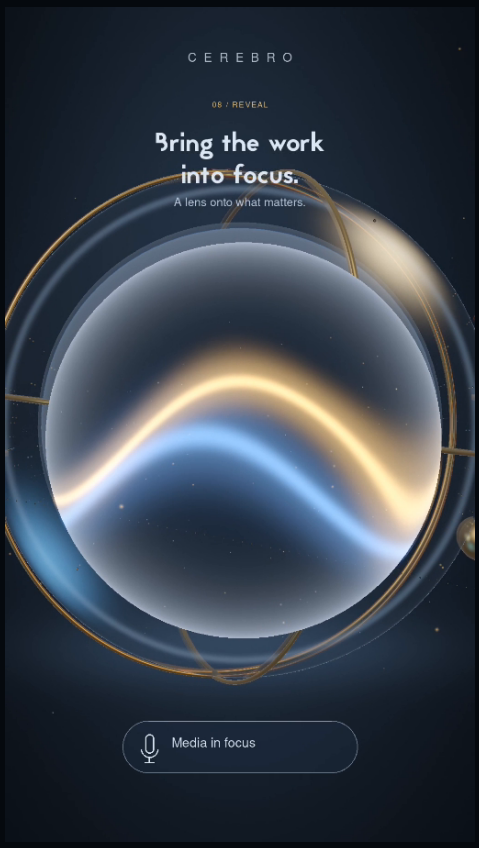

Teal is reserved for active voice response.
Separate mute, stop and listening states.

Media inside the world

The source reveal shows a round optical lens. Extend this into a real media aperture with a stable rim and correct foreground depth.

Asset fitting

Preserve source ratio. Use contain as the safe default; cover needs a documented focal point. Test 1:1, 16:9, 9:16 and portrait. Keep aperture size stable across swaps.

One cinematic finish

Neutral skin, cool shadows, restrained warm speculars, fine grain and subtle halation. Finish media consistently without hiding its identity or source quality.

Motion is one journey

One authority

One absolute timebase and one camera owner. Continuous position, orientation and focal length. World-anchored media and measured UI layout.

Type motion

Proposed: 2-frame glyph stagger, 12-frame entry, >=66-frame hold at 30fps and 10-frame exit. Use exact line breaks from the copy register.

Voice feedback

Proposed smoothed level: attack 80ms, release 240ms; ring scale 1 to 1.04. UI state must reflect actual permission and capture state.

Responsive movement

Recompute framing from the visible stage and safe areas; do not scale screen screenshots. Reduced motion retains all actions.

Frame counts

This source: 5400 frames at 30fps. A separately specified 24fps / 180s output: 4320 frames. Source camera keys are not recovered.

Existing film copy / 01

00 / INTRO / 3s

A world. Within reach.

A spatial operating system.

01 / AWAKEN / 18s

Begin with a voice.

Thought becomes a visible response.

02 / FOCUS / 39s

Attention becomes direction.

One intention. One clear path.

03 / DISCOVER / 51s

Every detail has a purpose.

Move closer. Keep the context.

04 / ENTER / 63s

Follow the thought.

The route unfolds as you move.

05 / CONNECT / 87s

One space. Connected.

Projects. People. Decisions.

Existing film copy / 02

06 / OPEN / 111s

A project opens a world.

The whole stays within reach.

07 / EXPLORE / 135s

Go deeper. Stay connected.

Context travels with you.

08 / REVEAL / 147s

Bring the work into focus.

A lens onto what matters.

09 / RETURN / 159s

Everything returns to clarity.

A continuous way to think and work.

10 / FINALE / 175s

CEREBRO

One continuous intelligence.

Observed copy is not a verified personal quotation or separate publication approval.

Transparent asset delivery

Editable vector

SVG for interface shapes and icons. Twelve included. Preserve editable paths and transparent canvas. Final text needs the approved font.

Actual 3D

GLB for sphere, shell, core, rails, node, portal rim and portrait rim. Seven starter files included; no baked background geometry.

Photoreal export

Produce 4096-square PNG RGBA and multilayer EXR from a locked 3D scene. Deliver beauty, reflection/transmission and optional shadow layers.

Alpha QA

Inspect over navy, white, grey and checkerboard. No dark fringe, baked checkerboard, clipped bloom or source-video cutout presented as master.

Logo and identity

Use exact approved NOJARA artwork. Obtain the actual portrait and licensed font files. No invented mark or generated likeness.

Handoff and signoff

1 / Open the visual guide

01_Guidelines/Sehly_Visual_Guide.html opens locally with included reference stills and component previews.

2 / Paste the master instructions

07_Generation_Prompts/SEHLY_MASTER_PROMPT.md contains the full build brief. Use the individual prompts and production matrix for asset work.

3 / Verify and compare

Check phone sizes, exact fonts/logo/copy, alpha composites, GLB visual parity, media UV fit, continuous camera and reduced motion.

4 / Audio remains production work

Use VO/music/FX stems, measured word timing, controlled ducking and encoded loudness verification. No sound-source audit or mix is delivered in this design kit.

5 / Keep status honest

Prepared for Sehly; not sent. Starter assets are generated and technically checked. Original sources and owner creative approval remain separate.
