01 / Visual design system

Exact source tokens, editorial direction and unresolved visual decisions. Use as the visual rulebook, not as a request to replace the live application.

STATUS SOURCE SNAPSHOT + PROPOSALS

Source: njr39/Cerebro-core at 1f78a1295d4dd36a11320995c1e14bf17788ac25. Earlier film-derived Lovart material is a separate reference. The PDFs are production instructions, not an asset approval or tested render.

Source authority

FIELD	SOURCE-BOUND VALUE
Current source lock	1f78a1295d4dd36a11320995c1e14bf17788ac25
Token file	docs/design-system/config/cerebro.config.json
Token schema	2.0.0
Token count	453 leaves
Token statuses	96 locked / 177 source / 19 reference-only / 149 extension / 12 deprecated

A token labelled extension or reference-only is indexed but not automatically approved. The source configuration also states that runtime bindings remain unresolved.

Primary locked rules

FIELD	SOURCE-BOUND VALUE
Fonts	{"titles": "Sora", "body": "Inter", "data": "JetBrains Mono", "arabic": "Noto Kufi Arabic", "not": "IBM Plex", "minimumPx": 13}
Captions	{"mode": "sentence-by-sentence", "fadeInMs": 180, "holdMs": 2400, "maxLines": 2, "noMidWordCut": true}
Banned in app	glow, bloom, animated or blurred halos, purple, gold treatments, glitch text
Stations	core, projects, files(=drive), media, tasks, people

Film reference versus application

The earlier owner-selected 180-second sphere film uses gold orbital rails and a Jaapokki-like display rhythm. The pinned application configuration locks Sora and bans gold treatments and bloom. Treat the film as a scoped visual reference and produce a clearly labelled variant only after the scope is decided. Do not silently replace the application token values.

Visual decisions Lovart can carry forward

- Deep navy spatial world, precise cool glass shell, silver-like core and clean readable interface as shown in references.
- One optical subject per frame. Use composited depth, restrained surface texture and designed negative space.

- NOJARA must be visible in every intended film frame, with distinct intro and outro treatments using the exact official logo file.
- Design source media in physical 3D apertures and panels. Preserve its source aspect and render the optical rim, reflection and mask as independent layers.
- Jaapokki is required in the earlier Sehly film-derived handoff; the pinned app config says Sora. Deliver font-dependent text as editable, keep both variants labelled, and await owner decision for app integration.

Complete token register

This is the full 453-leaf source token index, grouped by top-level namespace. Values are copied from the pinned JSON. Long structured values are abbreviated here; the companion JSON retains their exact objects.
