Cerebro Release Checkpoint

Knowledge Base Handoff Reports for Google Notebook

31 October 2026 / Africa Cairo / NOJARA Studios

05 / Read after Documents 01-04

31 October 2026, 21:29 UTC / 23:29 Africa/Cairo. This appendix updates release status only. The four earlier PDFs remain dated historical evidence; their source inventories, local candidate findings and limits are not silently rewritten.

Current verified release: main commit **`dd0db5043f8dafad8f1c47dce4d2ebd5d275cd95`** is reported by both production health endpoints. This establishes deployment identity and health responses, not complete visual, camera, voice or device acceptance.

Sequential release record

UTC / Cairo on 31 October	Event	Evidence and meaning
21:08:59 / 23:08:59	PR 144 merged into a feature branch; checkpoint 26dbe7e	Wrong release path for main deployment. This merge was not the final main release receipt.
21:20:23 / 23:20:23	Corrective PR 145 created against main, head 04816c7	Eight commits and 18 files reported in the corrective pull request.
21:22:50 / 23:22:50	PR 145 merged into main	Resulting main SHA: dd0db5043f8dafad8f1 c47dce4d2ebd5d275cd95.
21:26 / 23:26	Both production health endpoints checked with cache-busting requests	Each independently returned ok=true and buildSha beginning dd0db50, matching the main merge.
21:29 / 23:29	Appendix updated after browser smoke check	Health identity verified; entry smoke did not reach the dashboard in the tested environment.

Verified production identity

Primary endpoint: https://cerebro-core.vercel.app/api/health

Branded endpoint: https://cerebro-nojara.vercel.app/api/health

The release verification worker independently checked both endpoints. These responses do not verify browser entry, visual acceptance, live voice, hands or physical Safari behavior.

Acceptance status is still separate

The latest local camera-proof result was reported as **20 of 24 passing**, with four failures still open. These are local reported results, not independently rerun as part of this appendix. Do not replace them with the earlier candidate's 5 of 24 result or present deployment health as a substitute for the failing checks.

Remaining reported check	Observed result	Retained comparison
Desktop continuity	2.386 pose delta	Threshold <0.025
Phone continuity	9.513 pose delta	Threshold <0.025
iPad timing	2838.4 ms	Minimum 2850 ms
Desktop resize check	336 px	Threshold <=1 px

A separate composition-error metric was reported as approximately zero. That does not contradict or cancel the 336 px resize failure: they are different checks and must retain their own definitions and evidence. The available summary does not establish that one metric explains the other.

GitHub HQ visual and voice workflows were **skipped, not passed**. Browser and physical-device QA remain pending or unverified. Live voice, delayed tools, session teardown on devices, hand interaction and remote ElevenLabs configuration are not newly verified by this release record.

Post-deployment entry smoke: unresolved

In cloud Chrome at 1180 x 757 on build dd0db50, the page showed Preparing Cerebro and Skip against a black scene. No Open Dashboard appeared; the canvas count was zero and document.readyState was complete after approximately 35 seconds and one reload. Skip was not used. Microphone and authentication were not activated.

This is an observed entry-smoke failure in that environment, not evidence of a universal outage. Whether it reflects an environment limitation or an application regression remains unresolved. Phone and iPad smoke checks were not measured because the available device-emulation API was unsupported. The owner was informed and asked for a physical iPad check at 21:28 UTC. **Release health passed; the tested entry smoke did not.**

Next verification

Reproduce the entry stall on the deployed SHA and a physical device before attributing a cause. Bind artifacts to revision, viewport, renderer and state. Preserve all four failing camera criteria and record new test results separately. Verify live voice and hands only with the required user permissions.

Source receipts

Pull request: https://github.com/njr39/Cerebro-core/pull/145

Main merge commit:
https://github.com/njr39/Cerebro-core/commit/dd0db5043f8dafad8f1c47dce4d2ebd5d275cd95

Evidence classes: pull-request and merge metadata; independently checked production health responses; separately labelled local test reports. This appendix performs no new source edits, merges, deployments, access changes or remote voice configuration changes.
